Redigauz tubular bandage represents an extremely practical and reliable method of fixing wound dressing.

Tubular bandages replace the need for traditionally used flat gauze bandages which must be wound around the part to be covered and permit full freedom of movement.

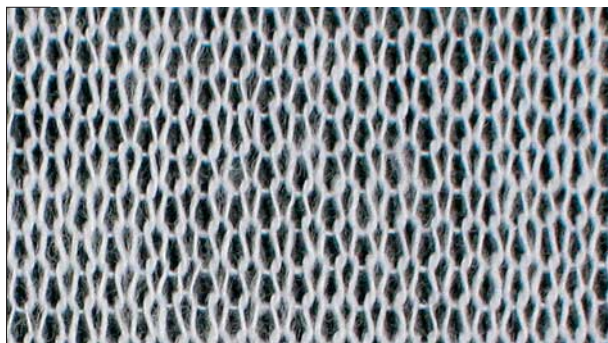

Redigauz bandages have an unbroken surface, and therefore do not come loose; wounds or sensitive areas of skin remain protected.

Redigauz is highly versatile, being suitable also for traction bandages, as a skin shield under plaster of Paris bandages, or as a covering material for splints and cotton wool padding.

Redigauz is manufactured from bleached cotton, natural cotton, synthetic and polypropylene.

It's water repellent.

Redigauz can be autoclaved to provide sterile dressings.

The knitted fabric.

Redigauz is water repellent.
